

# IVU

## In-Vehicle Unit

### In-Vehicle 3G and Satellite GPS Tracking Units

At the heart of the vehicle, the IVU is a flexible and robust solution for operators. It provides a broad range of features including secure data logging, a connection to engine management and on-board scales, with the integrated ability to provide GPS vehicle tracking.

### Features and Benefits

- ✓ 3G, GPS and bluetooth enabled
- ✓ IAP Certified
- ✓ Provides the ability to effectively monitor vehicles and drivers
- ✓ Online real-time access to job information
- ✓ Tamper proof
- ✓ Enclosed to survive even the harshest Australian environments
- ✓ Second-by-second accident analysis when required.
- ✓ Ample connection ports – serial port for on-board scales, temperature monitor, etc.
- ✓ Operates for more than a week even if power is disconnected via internal battery backup.
- ✓ Huge storage capacity – when out of communications range, it will store data for months and send when back in range.
- ✓ G-force sensor

The IVU connects via modern 3G networks to provide an effective fleet management tool. It is specifically designed for fleet management and vehicle location applications and is both Intelligent Access Program (IAP) and Certified Telematics Scheme (CTS) approved. This gives the operator confidence in the ability to run an efficient and productive business.
