

# NextGen

## Cloud-based Portal

An information & reporting portal for fleets and compliance.

**NextGen by Transtech, is the latest vehicle and fleet operational technology solutions available. The solution provides the ability to manage your operation from the one place, from basic fleet and vehicle administration to high level compliance and audit reporting, it has it all.**

NextGen gives transport operators a thorough management system, autonomous control over the operational elements. Operators are able to manage and control at their own pace. It's the simplest solution, allowing you to manage your business with ease.

### How does NextGen work?

NextGen is based on a subscription service. What this means is that it allows the operator to choose what modules and application are required to meet productivity and efficiency goals. Subscribe and pay for what is required to run a smooth operation. Don't worry though, there is the ability to upgrade a subscription at any point. An entire fleet and compliance management solution available from anywhere.

### What does NextGen include?

#### Complete Dashboard

The dashboard is a unique landing point of NextGen that provides an encapsulated view of any given operation. This one module doesn't require back-office staff to drill-down to different sections for information, it's right there.

#### Applications & Modules

NextGen is a module based system. It allows back-office staff to complete specific actions and interact with NextGen in a simple manner. These applications aren't standalone - the information is linked together to provide staff with the most up-to-date information.

#### Tracking & Location Management

At its very heart, NextGen provides you with the most efficient and ever-expanding tracking system that features a search function, replay tracking and displays integral tracking information that is required to follow vehicles in real-time.

#### Advanced Compliance & Audit Reporting

NextGen provides a thorough reporting system that uses real-time data and converts into easily understood information to make better and more informed decisions and decisively plan for the future.

#### Real-time Alerts

NextGen allows operators to see events as they occur, not after the fact via instant notification within NextGen, SMS or email. Each event is broken down with detailed information about what occurred, when, who, how, what happened directly before and after, and more.

#### Autonomous Administration System

NextGen provides operators with an easy-to-use standalone management and administration system that allows the operator to control fleets, vehicles, devices, users, roles, locations and more.

## NextGen's Architecture

**At the heart of NextGen is architecture that connects the applications available to operators with the components that provide the basis of delivering this information. NextGen provides the information in real-time, giving transparency into the operation.**

When partnered with the iFace, the combination empowers drivers to manage their own obligations to compliance laws and Chain of Responsibility regulations. It frees up compliance managers to focus on strategic initiatives rather than chase up non-compliant activity.

**How do alerts work?** The iFace captures driver events and the data is passed through and analysed by NextGen's advanced alerts engine. Notifications are then pushed straight to operating staff and managers, allowing for more informed decisions to be made quicker.

NextGen is designed from more than 25 years of transport and logistics knowledge and experience. Transtech has listened to what its customers and the industry to develop a truly unique and feature-rich application.

## Key Benefits

-  Real-time alerts and notifications.
-  Drill down to details with ease.
-  See immediate efficiency and productivity gains.
-  Clean and simple visual display, designed for ease of use.
-  Component based system. Operators can choose what modules they want to achieve their goals.
-  Ongoing updates and support.
-  Training videos available for driver and staff training.

## Key Features

-  Dashboard that encapsulates an overview of even the most complex of operations.
-  Detailed vehicle and fleet information.
-  Advanced administration system, giving operators autonomous control.
-  Simple yet functional tracking module that allows staff to track vehicle and device locational information.
-  Built in real-time fatigue management for both transport operators and drivers.
-  Real-time operational and compliance reporting.
